

## Multispectral Particle Absorption Monitor, Phase I

Completed Technology Project (2008 - 2008)

## Project Introduction

This Small Business Innovation Research Phase I project concerns the development of a multi-wavelength monitor that will provide rapid, real-time measurement of the average aerosol absorption coefficient in the parcel of sample air. This monitor will employ Aerodyne's proprietary Cavity Attenuated Phase Shift spectroscopy technology in order to produce a far simpler, smaller, lower cost alternative to more traditional instruments with no loss in sensitivity or accuracy. A unique property of the proposed instrument is that it requires little or no calibration. The Phase I work plan will focus on a proof-of-principle demonstration of the proposed technique that compares its performance with a conventional particle absorbance monitor. The Phase II project will entail constructing a field-ready prototype using the information gained in the Phase I studies and deploying the sensor on various field missions undertaken by Aerodyne's particle measurement research group. Aerosol particles affect the radiative balance of the earth directly, by scattering and absorbing solar and terrestrial radiation, and indirectly, by acting as cloud condensation nuclei. The atmospheric loading of aerosols generated through human activities can exert an influence on the earth's radiation budget comparable in magnitude with greenhouse gases. The uncertainties in the current understanding of aerosol direct and indirect forcing limit the ability to quantify human influences on climate change.

## Primary U.S. Work Locations and Key Partners

Multispectral Particle Absorption Monitor, Phase I

## Table of Contents

Project Introduction	1

Organizational Responsibility	1
Project Management	2
Technology Areas	2

## Organizational Responsibility

### Responsible Mission Directorate:

Space Technology Mission Directorate (STMD)

### Lead Center / Facility:

Ames Research Center (ARC)

### Responsible Program:

Small Business Innovation Research/Small Business Tech Transfer

## Multispectral Particle Absorption Monitor, Phase I

Completed Technology Project (2008 - 2008)

Organizations Performing Work	Role	Type	Location
★ Ames Research Center(ARC)	Lead Organization	NASA Center	Moffett Field, California
Aerodyne Research, Inc	Supporting Organization	Industry	Billerica, Massachusetts

## Primary U.S. Work Locations

California	Massachusetts
------------	---------------

## Project Management

**Program Director:**

Jason L Kessler

**Program Manager:**

Carlos Torrez

**Principal Investigator:**

Andrew Freedman

## Technology Areas

**Primary:**

- TX06 Human Health, Life Support, and Habitation Systems
  - └ TX06.4 Environmental Monitoring, Safety, and Emergency Response
    - └ TX06.4.1 Sensors: Air, Water, Microbial, and Acoustic
